

Business Case in Montana for Early Childhood Investments

In business, we rarely have the luxury of making an investment decision with as much evidence as we have to support the economic value of investing in early childhood development and education... Put bluntly, in my terms, they are a financial no-brainer. The only question is ‘how strong is the ROI?’ The answer: Two or three or more to one.

John Pepper,
former CEO,
Procter & Gamble

“By age 5, it is possible to predict, with depressing accuracy, who will complete high school and college and who won’t.”

David Brooks
Columnist, *The New York Times*

Businesses need employees who are job-ready, team-capable, and well-prepared – but we’re not getting them:

- The majority of fourth and eighth graders in Montana and across the nation are not proficient in both math and reading.¹
- In 2012, U.S. 15-year-olds ranked 27th among 34 developed countries in math, 17th in reading, and 20th in science.²
- 73% of young Montanans ages 17 to 24 would not qualify to serve in the U.S. military – ranking below 34 other states on this proportion. They could not meet the physical, behavioral, or educational standards for service – standards similar to those many employers use.³

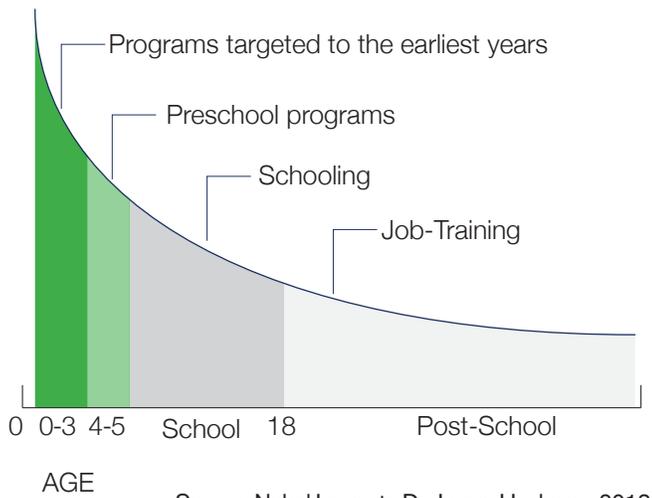

This failing workforce pipeline can be repaired, but we have to start early.

- The foundation of many skills needed for 21st -century jobs is established in the earliest years.
- Young children’s brains develop 700 synapses – neural connections that support learning and skills – every second.⁴
- The early childhood period (birth to age 5) is a time of rapid brain development; hundreds of new connections form every second. Early experiences play a large role in determining how brain connections are formed and in the “wiring” that becomes the foundation on which all later learning is built.⁵
- The learning gap between advantaged and at-risk children shows

WHO WE ARE

ReadyNation is the preeminent business leader organization based in the U.S. working to strengthen business and the economy through effective investments in children and youth. Find us at www.ReadyNation.org

Rate of Return to Human Capital Investment at Different Ages

up as early as 9 months of age. At-risk children can start kindergarten as much as 18 months behind their peers. Many of these children never catch up, and are at an increased risk of dropping out of high school.⁶

Evidence-based early childhood programs promote children's health and help them succeed:

These programs can address both children and their families to impact two generations. This is especially important given that 65 percent of Montana families with children under the age of six have all available parents in the workforce:⁷

- The Chicago Child-Parent Center (CPC) early childhood program and the Nurse-Family Partnership (NFP) home visiting program both cut abuse and neglect in half.⁸
- Children in the CPC were 29% more likely to graduate from high school, and the Perry Preschool Project children graduated 44% more often.⁹
- By age 30, individuals served by the Abecedarian early learning program were four times more likely to graduate college (and 42% more likely to be consistently employed).¹⁰
- Children not served by NFP had more than twice as many convictions by age 19. Those not served by CPC were 70% more likely to be arrested by age 18, while those not served by the Perry Preschool Project were five times more likely to be chronic offenders with five or more arrests by age 27.¹¹

- A study from UCLA and Johnson & Johnson found that providing basic health care education and tools for at-risk families reduced emergency room visits by 42%, saving individual families around \$500 per year. These efforts also reduced the number of missed school days by 29%.¹²
- A randomized trial found that Early Head Start, when it included a strong home visiting component, improved the education and training of mothers and increased their earnings by \$300 a month.¹³
- Randomized trials found that NFP reduced families' reliance on food stamps and welfare. In Memphis, for example, NFP families relied on welfare for \$1,000 less per year on average than families not in the program.¹⁴

Investments in early childhood programs yield short- and long-term returns:

- An independent analysis of NFP concluded that it produced a benefit-cost ratio of almost three to one and average net savings of \$17,000 per family by improving children's health, reducing child abuse and neglect, increasing their readiness for school and reducing their future crime. The same analysts reviewed over 20 studies of early education programs for at-risk children and found that the average benefit-cost ratio was over four to one, and average net savings were over \$26,000 per child served.¹⁵
- Child care and early learning professionals generally spend most of their earnings locally. In fact, an economic impact study found that for every \$1 invested in early care and education in Montana, a total of \$1.61 is generated in total spending within the state. This economic boost for local businesses is higher than investments in other major sectors such as transportation (\$1.52), construction (\$1.49), mining, (\$1.37), and utilities (\$1.32).¹⁶

Making early childhood development work for Montana:

Here are just a few reasons why smart, proven investments in our state's youngest children are critical to protecting Montana's competitive edge in a global marketplace:

- **Benefits children and parents:** One-quarter of children ages 0-5 in Montana live in poverty and one-third live in a household with a single parent, yet only one in 10 three-year-olds and less than a fifth of four-year-olds are enrolled in early learning opportunities through Head Start.¹⁷
- **Prepared for the classroom:** Early deficits are reflected in school, where at-risk students who have missed out on early education opportunities often struggle to keep up with classmates, even from the first day of kindergarten. Many students fail to catch up and a full 55 percent of Montana fourth graders perform below grade level in math, and 65 percent perform below grade level in reading.¹⁸

- **Earning caps and gowns:** Sixteen percent of high school students in Montana still have not donned a cap and gown after four years. And among high school graduates, less than a quarter meet the ACT College Readiness Benchmarks in the four core areas (English, reading, math, and science) and may not have the skills necessary for postsecondary education.¹⁹
- **Pursuing college and careers:** By 2020, 69% of jobs in Montana will require postsecondary education.²⁰ Longitudinal studies of the Abecedarian project have shown that high-quality early learning from six months to age 5 can improve students' rates of college completion.²¹

As business leaders, we know that we get better employees in the long-term when we prioritize high-quality early childhood education. An investment in our youngest learners is an investment in our state's economy.

Sixty-five percent of Montana families with children under the age of six have all available parents in the workforce.⁷

Who We Are

ReadyNation is the nation's preeminent business leader organization working to strengthen business through better policies for children and youth. Our more than 100 members in Montana and more than 1,100 members nationwide, educate policymakers and the public about effective investments that will help business compete in today's global marketplace, build a foundation for lasting economic security, and help children get on the right track to succeed in school and life.

How We Make a Difference

Our members educate local, state, and federal policymakers and the public by:

- Engaging elected officials through letters, calls, and meetings
- Speaking to the media through submitting opinion pieces or using radio/TV/social media outlets
- Participating in public presentations or press events

In addition, we offer webinars, business leader summits, new economic evidence, and profiles of business champions to help build the business network for early childhood. Our website is the nexus of business engagement across the country.

We are also leading a new project to explore *Pay for Success* (social impact bond) financing for early childhood (www.ReadyNation.org/PFS).

In 2013, we supported our members to have 230 media appearances and 240 policymaker meetings or sign-on letters. We have contributed to policy victories in states as diverse as Indiana, Maine, Michigan, **Montana**, Ohio, Oregon, Pennsylvania, Washington, and Utah.

How to Join

Go to www.ReadyNation.org/join-us. There are no membership fees, financial obligations, or formal meetings. Members are fully supported by our staff, minimizing your time commitment. Participation is always based on members' expressed consent,

For funders and endnotes, see our website.

ReadyNation is a membership organization of business leaders that operates under the umbrella of the non-profit Council For A Strong America.

Add your voice.

Contact us at: ReadyNation

WHAT YOU CAN DO:

- ✓ Tell your elected officials and the media about the value of early childhood investments.
- ✓ Adopt family-friendly practices at your business.
- ✓ Provide time, volunteers, expertise, and funding to local early childhood programs.
- ✓ Host an event to share information with business and civic groups.
- ✓ Encourage your local business organizations to develop formal positions on the benefits of effective early childhood programs.
- ✓ Give your employees information about the importance of childhood and what they can do.

HOW WE CAN HELP:

Business people who become members of ReadyNation (at no cost) can receive a variety of supports to speak out. You can:

- ✓ Distribute our free materials.
- ✓ Receive our monthly e-newsletter to learn about new evidence, business networking events, and champions.
- ✓ Contact us to find speakers as well as sample speeches, op-eds, talking points, and other communications materials.
- ✓ Get support for policymaker communications.
- ✓ Attend our conferences or connect with the national network of business leader advocates and learn more about championing early childhood programs.

availability, and desire to speak out on a specific issue. Members' names will not be used without their consent, except to be listed as members of ReadyNation.

16 America's Edge's commissioned an analysis of the linkage effects of early care and education. Analyses were conducted using fully disaggregated models and using models aggregated into nine very broad sectors. This analysis calculated the Type SAM (Social Accounting Matrix) Output multipliers for all nine major aggregated economic sectors in the state using IMPLAN models. The analysis was conducted on 2009 data, the most recently available data set for Montana. The early care and education sector's Type SAM output multiplier for Illinois was \$1.61. See Table for Type SAM output multipliers of each sector analyzed. Source: IMPLAN, 2009 analysis of Type SAM Output Multipliers for Montana.
